

Accessing knowledge by different means
is how **Algebracards** operate...

Strengthening Cognitive Abilities

Recall

from memory...color makes it easy & fun...perceiving what seems difficult as easy.... **visual processing**. Students can remember a whole section **due to the color** it was presented in!" recalling content!"

Compare

clarity & communication.....the many **examples** in each card easily show the **concept expansion** ..from **small to bigger more complex** steps, **using direction and color**.

Analyze images

the cards have a great format, important **facts in boxes, in color, directed by arrows**...all leading to **visual processing strength** as well as **increasing attention skills**.

Interpretation of text

Communication & engagement....

the cards are a great tool for the teacher to do **reciprocal teaching**....students have all the info on the content in one image...they are the ones that say what is happening at each step...complete engagement. Using white board markers on the cards encourages an engaging learning environment...**immediate feedback** for teachers.

It really works:)
